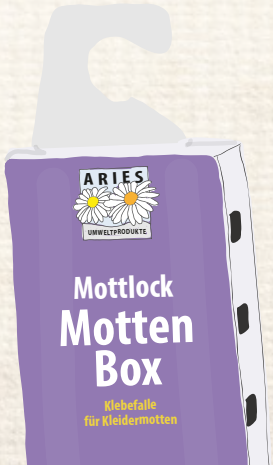
ARIES

UMWELTPRODUKTE®

Nature at work

Products for the ecological household and garden.



ARIES Environmental Products Crew.

Environmental products by conviction

From our location – set rurally between Bremen and Hamburg – we send our products for the ecological household on their way to your organic store. As an organic pioneer, we focus on environmental friendliness with every new product. Sustainable management in accordance with the CSE standard, as well as a field of herbs and lavender and bee hives – all run according to Bioland criteria – reflect our corporate values. ARIES®

Environmental Products was founded by Dieter Szczesny in 1988. A small range of organic alternatives for pest control has since become a wide offering of drugstore- and gardening products for environmentally aware customers. On the following pages you can discover our products in the categories environmental products, outdoor, organic gardening and organic cosmetics!

Unfortunately, biocidal products are not marketable in all EU countries.
Please check whether an authorisation in your country is required for the distribution of our biocidal products.

Nature at work

Our product landscape at a glance

Discover our broad range of products
More than 100 sustainable alternatives
for the environmental household and garden

ARIES Environmental Products

Useful helpers: Moths, bugs, flies & Co. can be held off and controlled effectively with beneficial insects, non-toxic bait traps and many more eco-friendly insect repellents and insecticides. ARIES Environmental Products are also admitted for the use in organic farms. Soothing products from natural sources: Choose from our versatile organic essential oils as well as our pastilles with nothing but organic ingredients.

ARIES Outdoor

Reliable Protection against mosquitos, ticks and other biting insects. No matter if skin spray, textile spray or essential oils for fragrance lamps, all formulations are based on highly effective plant extracts and are organic certified. For the whole family – at home and on the road, free of DEET. Discover our other useful helpers: The Anti Tick Card and the anti-itching Anti Mosquito Roll-on.

ARIES Organic Gardening

Organic power for strong plants in home and garden: homeopathic elixirs, organic fertiliser and plant extracts produced according to traditional gardening know-how. The organic seed products for urban and guerrilla gardeners contain open pollinating and primarily bee friendly seeds. The feathered garden inhabitants like the organic bird food in Bioland-quality. Mice, snails and ants can be banished permanently from terraces and paths with our sustainable solutions for pest control.

ARIES Organic Cosmetics

The NaTrue-certified ARIES Organic Cosmetics are based on untreated beeswax and rich plant extracts. They nurture in a highly natural and smooth way. We completely avoid artificial additives and alcohols and only use ingredients of organic quality. Lovingly made by hand, inspired by the work on the herb field in Stapel and with the bees from our ecological beekeeping.

We produce our cosmetics locally and by hand, avoiding any artificial additives. We treat our raw materials as gently and carefully as possible. All our organic cosmetics are certified according to the highest level of naTrue. This is a very challenging quality level for the producers. **Only true organic cosmetics obtain the naTrue-seal with three stars.**

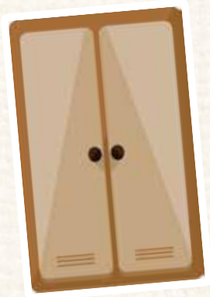
Textile moths:
Article no.: 44-4510-00
1 voucher for 6 deliveries with 6 cards every 2 weeks



Good to know

Moths have natural enemies too – the ichneumon fly. Almost invisible for the human eye (smaller than this dot: .), they parasitize the moths' eggs and thus free you from the uninvited guests. Mottlock® MOTTCONTROL® is a proven and completely natural alternative of infestation control. The beneficial insects solve the moth-problem in the pantry and wardrobe – effectively and discretely. As their natural enemy, the ichneumon fly interrupts the development cycle of the moths by parasitizing their eggs. That means they put their own eggs in those of the moths and thus killing them off. New beneficial insects hatch until all the moth eggs have disappeared. .

Information: The Mottcontrol®-subscription ends automatically and does not have to be cancelled.
